Great piece of donationware software, and is a lot lighter and less laggy than VAC.

All Audio Repeater instances should have 200ms latency and 16 buffers (try 100ms latency first, but if you notice skipping go up).. Buffer length and Buffers are clearly labeled so I won't explain that, just use what I tell you to use.. You can set that as your recording device in Camtasia/Audacity or whatever and get great quality audio of everything.

Case: You want to record Skype audio, emulator audio, microphone audio (assuming you can't explicitly set your audio device in the emulator) This stuff is found in Skype Properties -> Sound Devices Skype Input Device: Your microphone Skype Output Device: VAC1 Audio Repeaters: VAC1 -> Headset/Whatever your headphones are plugged into (what your Windows Output Device originally was) VAC1 -> VAC2 Microphone -> VAC2 Diagram of what this would look like in real life with cables: Summary You should be recording from: VAC2 The product of VAC2 is your Speaker audio and Microphone audio mixed together.. It's pretty low latency (lag between when the sound happens and when you hear it), at least low enough for our purposes.. Use waveout/direct sound in reaper's sound settings Set your microphone as the input and VB cable as the output.. For help with Virtual Audio Cable please reach out to VB-Audio Virtual Audio Cable is a program created by some jerk that creates fake audio devices on your computer and allows you to mirror audio between them using a program the guy wrote called Audio Repeater.. This shit may seem difficult at first but don't worry, once you set it up once it'll take five seconds for you to do again. [Drivers Ed Chapter 4 Hidden Message](#)

Dec 21, 2016 How to Setup Virtual Audio Cables A/V Club; Streamer Handbook Note: While we suggest utilizing Virtual Audio cable where necessary and when applicable, we're unfortunately unable to support any technical issues with the software.. The trial version repeats the word 'trial' out of the sound device every few seconds which is fucking annoying, so buy it once you get your setup working properly.. To mirror the sound you need to run several instances of Audio Repeater (Start -> Programs -> Virtual Audio Cable -> Audio Repeater). [Yakusoku No Neverland 12 Download](#)
